Bilal Khan - Full-Stack Web Developer

GitHub: github.com/bilal-builds

Summary
Full-Stack Web Developer focused on shipping reliable, measurable results for clients.

Skills
React, Next.js, TypeScript, Node.js, Express, Django, FastAPI, PostgreSQL, Redis, Celery, GraphQL, Tailwind CSS, Stripe payments, WebSockets (and more)

Selected projects
- Media upload and processing backend for a legal startup (2026): an upload service with background processing and S3 storage; p95 upload latency down to 6 seconds. Tools: Django, Celery, Redis. [github.com/bilal-builds/upload-pipeline]
- Containerised cloud migration for a fintech company (2026): moved a monolith to containers on AWS with CI/CD; hosting cost down 69%. Tools: Docker, AWS, PostgreSQL. [github.com/bilal-builds/devops-migration]
- Real-time support chat for a real estate platform (2026): live chat with typing indicators and presence; handles 150000 concurrent users. Tools: WebSockets, Node.js, Redis. [github.com/bilal-builds/realtime-chat-real-estate]
- GraphQL API consolidation for a manufacturing product (2026): one typed API replacing 2 legacy REST services; page payloads 78% smaller. Tools: GraphQL, Node.js, TypeScript. [github.com/bilal-builds/graphql-api-manufacturing]
- Content portal with admin panel for a media publisher (2025): an editorial CMS with custom workflows; editors publish 55% faster. Tools: Django, PostgreSQL, React. [github.com/bilal-builds/cms-portal]
- Analytics dashboard SaaS for SaaS teams (2025): a multi-tenant dashboard with role-based access; onboarded 1200 paying teams. Tools: React, TypeScript, Next.js. [github.com/bilal-builds/saas-dashboard-saas]
- Checkout and subscription billing for an media store (2025): a new checkout with subscriptions and dunning emails; checkout conversion up 65%. Tools: React, Stripe payments, Node.js. [github.com/bilal-builds/checkout-revamp-media]
- Containerised cloud migration for a real estate company (2025): moved a monolith to containers on AWS with CI/CD; hosting cost down 44%. Tools: Docker, AWS, PostgreSQL. [portfolio/devops-migration-real-estate]
- Analytics dashboard SaaS for SaaS teams (2024): a multi-tenant dashboard with role-based access; onboarded 800 paying teams. Tools: React, TypeScript, Next.js. [github.com/bilal-builds/saas-dashboard]
- Checkout and subscription billing for an real estate store (2024): a new checkout with subscriptions and dunning emails; checkout conversion up 67%. Tools: React, Stripe payments, Node.js. [github.com/bilal-builds/checkout-revamp]
- Booking and scheduling web app for a legal clinic network (2024): online booking with reminders and deposits; no-shows down 80%. Tools: Next.js, TypeScript, PostgreSQL. [github.com/bilal-builds/booking-app]
- Content portal with admin panel for a edtech publisher (2024): an editorial CMS with custom workflows; editors publish 58% faster. Tools: Django, PostgreSQL, React. [github.com/bilal-builds/cms-portal-edtech]
- Async internal API for a SaaS operations team (2023): a typed internal API with caching and background jobs; API p95 at 50 ms. Tools: FastAPI, Python, PostgreSQL. [github.com/bilal-

builds/internal-api]
- Media upload and processing backend for a logistics startup (2023): an upload service with background processing and S3 storage; p95 upload latency down to 3 seconds. Tools: Django, Celery, Redis. [github.com/bilal-builds/upload-pipeline-logistics]
- Async internal API for a logistics operations team (2023): a typed internal API with caching and background jobs; API p95 at 70 ms. Tools: FastAPI, Python, PostgreSQL. [portfolio/internal-api-logistics]
- Real-time support chat for a edtech platform (2022): live chat with typing indicators and presence; handles 20000 concurrent users. Tools: WebSockets, Node.js, Redis. [github.com/bilal-builds/realtime-chat]
- GraphQL API consolidation for a SaaS product (2022): one typed API replacing 6 legacy REST services; page payloads 86% smaller. Tools: GraphQL, Node.js, TypeScript. [github.com/bilal-builds/graphql-api]
- Booking and scheduling web app for a legal clinic network (2022): online booking with reminders and deposits; no-shows down 91%. Tools: Next.js, TypeScript, PostgreSQL. [github.com/bilal-builds/booking-app-legal]
